

WORLD HISTORY

WW I Death Tolls

60 pts

TASK #1

Investigate the number of military deaths (KIA) suffered by each major nation involved in WWI. After researching these statistics, compile them into a pie chart or bar graph. You will need 2 graphs, one for the **Central Powers** [Germany, Austria-Hungary, Turkey, Bulgaria] and one for the **Allied Powers** [Great Britain, France, Russia, United States, and Serbia].

These graphs **must** be **colored** in (not black/white/pencil) regardless of being **hand drawn** or **printed**.

Use the following website: www.firstworldwar.com/features/casualties.htm

TASK #2

Analyze the graphs you compiled (on the number of military deaths IN TASK #1). You should NOTICE the U.S. suffered far fewer deaths than any other Allied country, except Serbia, during WWI. Write a 50-75 WORD paragraph telling why you think this death toll difference could lead the U.S. to have a different opinion than that of the other Allied countries as how best to handle punishment of the Central Powers after WWI.

TASK #3

In addition to the military deaths during WWI, a deadly epidemic began in 1918 and spread throughout the world. It has been estimated that 20-25 million people died from the epidemic. Write a 50-75 word paragraph, including at least 3 explanations, as to why the epidemic spread so quickly around the world.
